BMW ISID configuration manual

Firstly install the vmware workstation.

Please insert the USB Key before you start the vmware workstation. This is very important, otherwise the software will not able to run correctly!!!!

1. Install VMware Workstation 8, run and select Virtual Network Editor.

2. Configure network exactlly as on picture. At green ellipse marked place for VMnetO select network adapter which will be used for connection with ICOM, OPS or ENET cable.

3. Open ISID virtual machine. If you have Win x64 and host RAM more then 4Gb, then you can set ISID memory size from 1536Mb to 2048Mb. ISSS can process Exx with 2048Mb instead of 4096Mb, but will show you warnings. Don't use other values since this will cause failures.

4. Open VM properties and check Network Adapter set to VMnet2, close and boot.

5. When asked, select "I moved it".

6. Wait until VM boots and ISTA icon gets active.
